

BedScan-UV™ for Bed & Mattress Sanitizing

Advanced, Rapid and Portable UV Mattress Sanitizer

BedScan-UV™ is an advanced and practical mattress sanitizer that is clean, green and effective at reducing growth on mattresses.

UV-C light is documented at reducing microbes. With an affordable price and ease of use, the BedScan-UV™ is an ideal product for professional cleaning and mattress sanitizing companies. This unit is *always* an adjunct to your standard cleaning methods.

Ultraviolet-C exposure is effective at minimizing microbial growth. Because the bulbs are in such close proximity to the mattress, surfaces more effectively cleaned.

BedScan-UV™ is made with high grade stainless steel with super-slick frictionless plastic slides that allows the unit to effortlessly glide across any mattress. An optional metronome called a

digital "Pacer" that emits both an audible sound and a red LED light that permits the operator to move the BedScan-UV™ at the proper speed so that they do not move it too fast or too slowly! There's nothing like it!

BedScan-UV™ is available with two or four UV-C Germicidal bulbs and two voltages (120V or 220V) with numerous plug types. Our optional carrying case is rugged, waterproof, dustproof and crushproof with solid foam insert padding with polyurethane wheels. Now is the time to offer your customers the best mattress cleaning.
