

AERO-UV™

Direct UVC Surface-to-Air Room Disinfection

Ideal for operating rooms, surgical suites, ICUs, isolation rooms and patient rooms, **AERO-UV™** is the best choice for keeping a room totally disinfected.

Our ceiling mounted UVC lights can rapidly sanitize all surfaces and the even the air in any room. And because there are virtually no disposables it costs just pennies to thoroughly treat either large or small spaces.

Now, with just the flick of a light switch or by using our unique remote control your operating room can be safely sanitized in as little as 15 minutes. And there is no need to purchase expensive mobile sanitizing units that require trained personnel.

For added safety, **AERO-UV™** is available with our 360° motion detectors that can quickly shut-off your UVC light system in a split second should anyone enter the room during a treatment.

MRSA-UV™ has also designed the **AERO-UV™** to work in conjunctions with our wall mounted, 24/7, **BREEZE-UV™** air sanitizer to make for a complete room disinfection system. The Breeze attaches to the *upper* wall of any room and is always sanitizing the air in that space even with persons occupying that room. This is a must for all surgical suites.
