

APEX-UV

Far-UV Ceiling or Wall Mounted Air Sanitizer

Rooms can be safely occupied when units are ON.

Design Idea

So Far, the Ultraviolet germicidal lamp(254nm)、UV-LED(265nm/275nm) used in industry can cause serious injury when directly exposing to human body. Due to the damage to the human body, the above lamps are generally used for UV sterilization on the surface of enclosed spaces.

At present,as pointed out in the published papers of various universities, 222nm ultraviolet lamp will not cause harm to the human body, that's to say, 222nm ultraviolet lamp can be used as germicidal lamps under natural conditions.

Therefore we design a 222nm germicidal lamp called U57 both sterilizing the surface and air.

💡 The air continuously passes through the lamp sterilization area to achieve the purpose of sterilization through the air self-circulation.

💡 Since the deep ultraviolet rays with a wavelength of 222nm can only reach the outermost stratum corneum of the skin, it will not damage the DNA of skin cells and effectively protect your health.

The glass used on the surface is a filter, which can be effectively filter out the clutter irradiated by the eximer lamp and ensure the purity of the 222nm wavelength.

💡 Two customized modes can be selected by setting the PIR sensor program.

Mode 1: When person walks into the microwave sensing area, the UV lamp will automatically turn off.

Mode 2: When person walks into the microwave sensing area, the UV lamp will automatically turn on for 1 hour.

Feature III: Ozone Free & No Hg

💡 The common 222nm excimer lamp on the market will generate ozone due to process reasons. Excessive ozone content can cause cough, dyspnea, decreased lung function, withering of plants, and oxidation of precious metals. The 222nm lamps we developed are ozone-free and can protect the safety of human beings.

💡 The common 254nm glass tube on the market contains mercury, and the 222nm excimer lamp does not contain mercury, and will not leak mercury due to the broken glass of the lamp tube.

Size & Price

Product Specification

UVC Power: 20w
Input Voltage: 100V-277V
Tube Type: Excimer tube
UV radiation intensity at 50cm: 20 μ m/cm²
Wavelength: 222nm
Installation: Ceiling mount or Wall mount
Sensor Mode: PIR Sensor
Product Size: 229mm* 53mm* 104mm
Warranty: 2 Years
Certification: CE/ROHS/FCC

only \$695

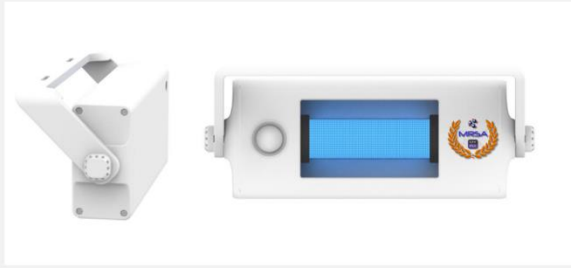

104mm
(4in)

229mm (9in)

Suitable for family, shops, supermarkets, elevators, clinics, toilets, offices and other public places.

Ceiling mount

Wall mount
