

Razor-UV

Rapid Razor-UV Cordless Handheld Sanitizer for Rescue Ambulances

**Rapid *On-the-Spot* Sanitizing of Ambulance Interiors including: Countertops, Stretchers, Hand Rails, Medical Monitors, Seating, Floors, Walls and also Fire House Turnout Gear, Fire Equipment, Fitness Room, Barracks, Sinks, Lockers, Kitchen...
*without having to evacuate all occupants!***

The **Rapid Razor-UV™** packages a multi-patented UVC technology in a versatile, hand-held, rechargeable device designed for "**SPOT**" decontamination of surfaces that may harbor bacteria, viruses and mold.

The user simply passes the device closely over the contaminated surface area, allowing the energy from the very high output UVC Emitter to rapidly and effectively decontaminate surfaces. Our "pacer" helps set the speed. A recessed safety shield prevents direct exposure to UVC energy, while also adding reflectance that increases its effectiveness.

- UVC is capable of inactivating surface microbes that contribute to poor IAQ and/or the spread of infectious disease, including: mold and mold spores, bacteria including MRSA, TB, E. coli, Listeria, Salmonella; C. diff spores, CRKP, VRE and all viruses including colds, flu and measles, HIV Retrovirus, Infectious Hepatitis, Norovirus and all microbes.

- Long service life – typically around 9,000 hours
- Uses solid-state electronic power supply and rechargeable batteries that lasts over 3 hours of use or over 500 scans on a single charge.
- Produces no ozone or other secondary contaminants – will not harm building occupants, equipment or furnishings.
- Portable, versatile and easy – just charge and use. No installation required. Uses twin lights.
- Proven through independent testing to provide the highest output of any cordless UVC device on the market, for the most effective germicidal control.
- A must have for emergency contamination of surfaces due to vomiting, blood, feces.
